My self PRUTHVIRAJ S,

Working as **Quality Assurance Engineer** in INFIBEAM AVENUES LIMITED.

I am working in **RELIANCE JIO PROJECT**, and I am handling **FULFILMENT, REPORTS** and **SETTLEMENTS** modules in the project and I am involved in set of testing process to check the quality of the software as mentioned:

- My daily routine is to do **Sanity check** to verify all the things are stable as per the requirement before testing is started.
- I attend **meetings** if any to discuss the STATUS of testing
- I am involved in extracting **test cases** for the modules for which I am assigned.
- **Executing** all the testcases which are extracted and reviewed.
- **Updating** the testcases as per the new requirement or any modifications done.
- Reporting **ISSUES** for the developers.
- I do **Functional-testing** to check the functionality of the components present in the web page.
- I do **Integration-testing** to check the data flow between the modules or pages.
- I do **System-testing** to verify that all the end-to-end scenarios is working and end scenario is working as expected
- Simultaneously I do **Compatibility-testing** to check that software is functionally stable in different platform.
- Also, I am involved in testing the software in **MOBILE** to check that software is working as expected in mobile device.
- **Regression testing** is done on regular basis to check the functionality of the software is stable after any modifications are done.
- **Adhoc testing** is done in order to execute all the negative scenarios and check that software is responding as expected for negative scenarios.
- Testing the website from **customer** point of view.
- I am responsible for testing **Styling** of components in the software and report to the concerned person if any changes had to be made.
